

# Introducing EITI Data: Enhancing Transparency in the Extractive Industries

2024 Regional Roadshows (Luzon Leg)  
15 August 2024 (Thursday),

---

The **Extractive Industries Transparency Initiative (EITI)** is a global standard of transparency that requires oil, gas, and mining companies to disclose what they pay to the government, and the government to publish what they collect from these companies, for the open and accountable governance.

*“We believe that a country’s **natural resources belong to its citizens.** Our mission is to promote understanding of natural resource management, strengthen public and corporate governance and accountability, and **provide the data to inform policymaking and multi-stakeholder dialogue in the extractive sector.**”*

# Importance of Transparency in the Extractive Sector

By making information about contracts, revenues, and payments public, it becomes harder for officials or companies to engage in corrupt practices

Transparency allows citizens and oversight bodies to track how much money is generated from natural resources and how it's being used by the government.

Open access to information helps citizens understand how their country's resources are being managed, fostering trust in government and industry.

Established by virtue of **EO No. 79, s. 2012** and **EO No. 147, s. 2013**

Admitted as an EITI candidate country on **22 May 2013**

Included under the **Philippine Open Government Partnership (PH-OGP) National Action Plan** since 2013

Operationalized by a Multi-stakeholder Group (MSG) from government, industry, and civil society with assistance from a National Secretariat

# PH-EITI primarily works to achieve five specific objectives

Show **direct and indirect contribution** of extractives to the economy (through the EITI process)

Improve **public understanding** of the management of natural resources and **availability of data**

Strengthen **national resource management** and **government systems**

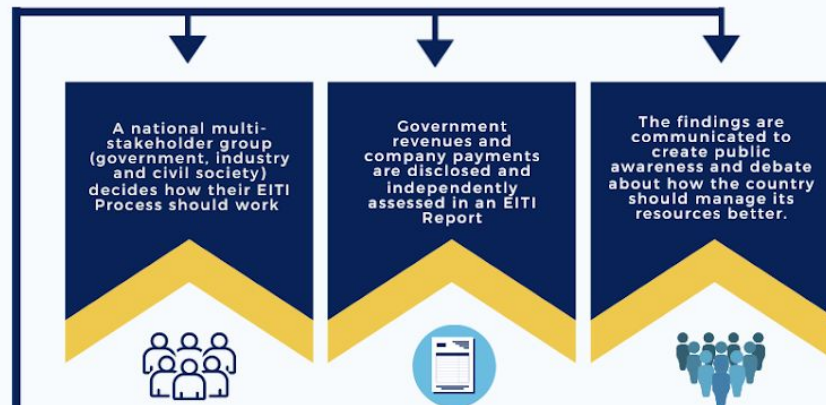

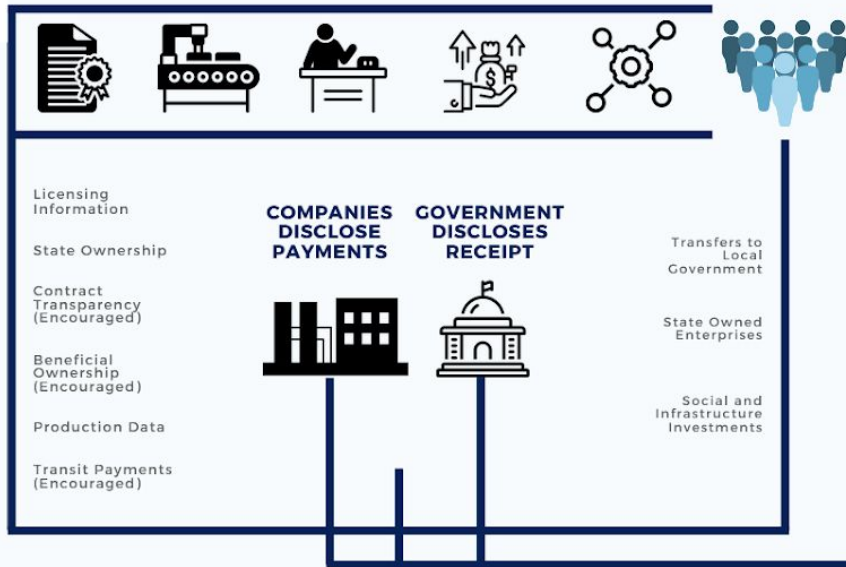

Create opportunities for **dialogue and constructive engagement** in natural resource management in order to **build trust and reduce conflict** among stakeholders

Pursue and strengthen the extractive sector's contribution to **sustainable development**

# EITI Reporting Process

Licenses & Contracts    Monitoring Production    Tax Collection    Revenue Distribution    Expenditure Management

# Data disclosed by the PH-EITI through the EITI process

## Contracts & licenses

- Contracts
- Beneficial Ownership

## Production

- Exploration Activities
- Production figures
- Export data

## Revenue collection

- Tax revenues
- Sales by governments and state-owned enterprises

## Revenue allocation

- Revenue management
- Distribution of revenues
- Subnational Transfers

## Social & economic spending

- CSR payments
- Contribution to national economy

# The Future of EITI Data

## Digitalization and Data Mainstreaming

- Simplification through data visualization, this effort will transform complex EITI data into easily digestible visual formats like charts, graphs, and interactive dashboards. This approach allows users to quickly identify trends, patterns, and anomalies in extractive sector information. By making data more accessible and intuitive, visualization enables a broader range of stakeholders - from policymakers to the general public - to engage meaningfully with the information.
- The PH-EITI is taking steps in the development of a centralized digital platform in collaboration with extractive companies and relevant government agencies. This innovative platform would streamline reporting processes, enhancing ease of doing business while simultaneously bolstering transparency and accountability in the sector.
- PH-EITI plans to provide a timely reporting by enhancing inter-agency coordination. This process involves creating robust communication channels and data-sharing protocols among various government bodies and industry stakeholders.

Thank you!
