## Overview of the FY 2023–2024 PH-EITI Country Report

The FY 2023–2024 Country Report of the Philippine Extractive Industries Transparency Initiative (PH-EITI) is framed by the theme *Expanding Horizons: Promoting Accountability through Transparency and Inclusive Participation in Extractive Governance*. Entering its second decade of implementation, PH-EITI demonstrates how transparency has evolved from a reporting obligation into a governance instrument that supports fiscal accountability, policy reform, and informed public participation across the extractive value chain. This report provides both a consolidated account of extractive revenues and a broader examination of how transparency is being utilized to address emerging legal, environmental, and social governance challenges.

The Contextual Information chapter situates the extractive sector within a period of significant policy transition. During 2023 and 2024, PH-EITI data and processes were increasingly leveraged to support reforms beyond revenue disclosure, particularly in anti-corruption efforts, fiscal policy discussions, and environmental governance. These include advancing Beneficial Ownership transparency through coordination with the Securities and Exchange Commission, utilizing extractives data in deliberations on the mining fiscal regime, and the passage of the Philippine Ecosystem and Natural Capital Accounting System Act, which formally links extractive activity with natural capital accounting. At the same time, the chapter highlights persistent governance challenges, including risks associated with small-scale mining, questions around the effectiveness of community consultation mechanisms, and the uneven realization of benefits at the local level. These dynamics underscore the central tension addressed by the report theme: how expanding transparency can strengthen accountability while ensuring that participation remains meaningful for affected communities.

The Reconciliation chapter forms the technical core of the report. It presents the independently reconciled payments made by companies engaged in large-scale metallic and non-metallic mining, oil and gas, and coal operations, alongside revenues reported by national government agencies and local government units for fiscal years 2023 and 2024. Covering hundreds of projects and involving multiple national agencies and local governments, the reconciliation process continues to enhance the reliability, consistency, and credibility of extractives data in the Philippines. Beyond validating figures, this chapter illustrates how standardized reporting and systematic disclosure contribute to clearer accountability relationships between companies, government institutions, and subnational recipients of extractive revenues.

Chapter 3, *A Decade of Transparency*, provides historical depth to the report by tracing PH-EITI's evolution since its establishment in 2013. It documents how early legal and institutional barriers to disclosure were addressed through multi-stakeholder solutions, how the Philippines achieved international recognition under the 2016 EITI Standard, and how transparency has been progressively embedded into government systems through digital reporting tools, contract disclosure, and local revenue tracking mechanisms. The chapter also highlights the gradual expansion of participation beyond the national level through regional roadshows, local dialogues, and subnational transparency initiatives, reinforcing the principle that accountability is most effective when information is accessible, usable, and responsive to local realities.

Taken together, the FY 2023–2024 Country Report reflects an expanded understanding of extractive transparency. It shows how data disclosure, reconciliation, and stakeholder engagement are increasingly aligned with accountability objectives, from fiscal reform and anti-corruption efforts to environmental accounting and subnational governance. As PH-EITI looks ahead, the report positions transparency not as an end in itself, but as a means to support inclusive participation, informed decision-making, and more equitable outcomes in extractive governance, consistent with the expanding horizons envisioned in this reporting cycle.
